

Standard Health Record

One human, one health record

We're changing healthcare
as you know it.

Getting care should be as fast as
getting an Uber.

Viewing your health will be as
easy as Mint.

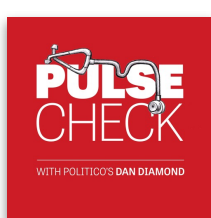

Choose who you want to share
your health information with.

You will own your health data.

Great! How does SHR work?

First, we need to capture the right
data the same way, every time.

Listen to Dr. Karen Desalvo,
National Coordinator for Health IT
talk about how healthcare should
work and data interoperability.

29 sec

SHR will start with your critical data
to support patient ID, emergency
and primary care.

Sign me up!

We want your help.
Our open source project needs
collaboration with you, clinicians,
and forward thinking organizations
to deliver SHR to the nation.

What's the new healthcare experience?

Here's how encounters will feel:

Telemedicine primary care

Emergency care
